

LAB – 3

Project Title: Agile-Manifesto-Practice-Mapping

Project Scenario: Online Course Registration System (OCRS)

Step 1: Study Agile Manifesto Values

PHASE 1: UNDERSTANDING AGILE MANIFESTO

1. Individuals and interactions over processes and tools

Traditional approach failure:

Teams only follow strict processes and tools, so communication between team members becomes less.

Agile solution:

Agile encourages team discussions, daily meetings, and collaboration so people work together effectively.

2. Working software over comprehensive documentation

Traditional approach failure:

Too much time is spent writing documents instead of building the actual software.

Agile solution:

Agile focuses more on delivering working software quickly rather than creating long documentation.

3. Customer collaboration over contract negotiation

Traditional approach failure:

Customers are only involved at the beginning and end of the project.

Agile solution:

Agile teams interact with customers regularly and take feedback during development.

4. Responding to change over following a plan

Traditional approach failure:

Changes are difficult to make once the project plan is fixed.

Agile solution:

Agile allows teams to easily accept and implement changes dur

Step 2: Study Agile Manifesto Principles

1. Early and continuous delivery of valuable software

Teams deliver small working features frequently so customers can use them early.

2. Welcoming changing requirements

If customers request new features, the team updates the backlog and plans the change in the next sprint.

3. Frequent delivery of working software

Teams release working software after every sprint.

4. Collaboration between business stakeholders and developers

Developers and stakeholders regularly discuss requirements and progress.

5. Working software as the primary measure of progress

Progress is measured by completed working features instead of documentation.

6. Regular reflection and adaptation

After every sprint, the team discusses what went well and what needs improvement.

PHASE 2: MAPPING AGILE MANIFESTO TO PRACTICES USING TAIGA

Step 3: Create Agile Project in Taiga

Step 4: Identify Agile Practices

Agile Practice	Agile Principle Supported	Justification
User stories	Customer collaboration	Requirements are written from the user's perspective
Product backlog prioritization	Responding to change	Backlog items can be reordered based on new needs
Sprint development	Frequent delivery	Work is completed in short iterations
Stakeholder feedback	Collaboration	Stakeholders provide input regularly
Team communication	Individuals and interactions	Team members discuss tasks and issues
Retrospective meetings	Continuous improvement	Team reviews performance after every sprint

Step 5: Create User Stories in Taiga

The screenshot shows the Taiga Scrum Backlog view for the project 'Agile-Manifesto-Practice-Mapping'. The left sidebar contains navigation links for Projects, Scrum, Backlog, and Issues. The main content area displays the Scrum Backlog with a progress bar at 0% (62 defined points, 0 closed points, 0 points/sprint). Below the progress bar is a section titled 'CUSTOMIZE YOUR BACKLOG GRAPH' with a link to 'Admin'. The Backlog section shows 3 user stories with a search filter and a 'Tags' toggle. The user stories are listed in a table with columns for User Story, Status, and Points.

USER STORY	STATUS	POINTS
#1 As a student, I want to register so that I can enroll in courses.	New	21
#2 As a student, I want to drop a course so that I can manage my schedule.	New	16
#3 As an admin, I want to add and update courses so that students can view accurate information.	New	25

Step 6: Map Agile Principles to Taiga Features

The screenshot shows the Taiga Wiki page titled 'Mapping Agile Manifesto to Practices'. The left sidebar contains navigation links for Projects, Scrum, Issues, and Wiki. The main content area displays the Wiki page with a table mapping Agile Principles to Agile Practices and Taiga Features. The table has four columns: Agile Principle, Agile Practice, Taiga Feature Used, and Evidence. Below the table is a section for '0 Attachments' and an 'Activity' section.

Agile Principle	Agile Practice	Taiga Feature Used	Evidence
Welcome change	Backlog reprioritization	Product Backlog	Priority changes
Frequent delivery	Iterative development	Sprints	Sprint board
Customer collaboration	Feedback & reviews	Comments	PO comments
Individuals & Interactions	Team communication	Task comments	Discussion logs
Measure progress by software	Incremental delivery	Sprint board	Completed stories

PHASE 3: CHANGE SIMULATION & REFLECTION

Step 7: Change Simulation

Step 8: Reflection Questions

1. Which Agile principle was easiest to implement using Taiga?

The easiest Agile principle to implement using Taiga was frequent delivery of working software. Taiga provides features like sprints and sprint boards, which help teams divide work into small iterations. By completing user stories in each sprint, the team can deliver small working features regularly and track progress easily.

2. Which Agile principle was difficult to represent using a tool?

The most difficult principle to represent using a tool was individuals and interactions over processes and tools. Although Taiga provides comments and discussion features, real interaction happens through direct communication, meetings, and teamwork. A tool cannot fully replace human communication.

3. How does Taiga support collaboration and transparency?

Taiga supports collaboration and transparency by allowing all team members to see the product backlog, user stories, sprint boards, and task progress. Team

members can also use comments, updates, and wiki pages to share information and discuss tasks. This makes the project progress visible to everyone in the team.

4. Can Agile values exist without tools? Justify your answer.

Yes, Agile values can exist without tools. Agile mainly focuses on team collaboration, communication, flexibility, and continuous improvement. These values depend on the people and their mindset rather than the tools they use. Tools like Taiga only help organize and manage the work, but Agile principles can still be followed even without them
